

Effectiveness Efficiency Satisfaction

www.fotoinc.com

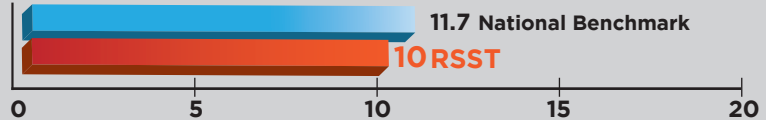

136% of national predicted effectiveness of outcomes (change in functional score)

Effectiveness of Outcomes

117% of national predicted efficiency of care (number of patient visits)

Efficiency of Care

99% Not to mention, we rate in predicted patient satisfaction

Better outcomes + fewer visits = fewer healthcare dollars spent for your patient.

Richardson Spine and Sports Therapy

Richardson Spine and Sports Therapy (RSST) is recognized as a top 10% performing clinic in Texas for its results from FOTO (Focus on Therapeutic Outcomes) to assess patient care efficiency, effectiveness and satisfaction. FOTO uses a 10-point, risk-adjusted criteria set to compare patient care measures amongst its database of 2,000+ US providers.

How do we use FOTO and its statistical comparisons?

Ensure Patients Truly Benefit

While many therapy techniques can temporarily reduce pain, physical therapy's ultimate goal is measurable improvement in functional status. RSST performs regular assessments of patient progress through both objective measures (ROM, strength, etc.) and functional status.

Ensure Patient Goals Are Met

Through regular assessments, RSST clinicians ensure that we are addressing patients' pain and objective measures, as well as their functional goals.

Ensure Therapy Dollars Work

By continuously comparing our performance to those of 2000+ outpatient therapy clinics nationwide, we are able to ask: do our treatments meet the National Standards of Care for effectiveness and efficiency? RSST has demonstrated that we not only meet those standards, we exceed them in all areas.

WHAT IT MEANS FOR YOUR PATIENT?

As a healthcare provider, our success depends on the quality of care we provide. Through our knowledge, expertise and independent measurement of our performance, we offer the high-quality, cost-effective and efficient care that your patients deserve.
