

WHAT IS FOTO?

A web based patient assessment system that enables fair, accurate measurements and predictions of the expected improvement in YOUR functional status.

WE measure here... so make sure you ask your therapist about your FOTO results and view our organization's quarterly results at: www.leadtheway.ca

INITIAL FUNCTIONAL STATUS

- **You** completed a FOTO assessment specific to **your** body part or condition that needs treatment.
- **Your** responses help calculate **your** functional status score between 0-100.

PREDICTED GOAL STATUS

- FOTO uses 10 risk adjustment factors to predict how much **your** score should change following treatment.
- FOTO will also predict the number of visits **you** require.

DISCHARGE FUNCTIONAL STATUS

- **You** may complete other assessments during treatment but for sure at discharge.
- **You** will also be able rate **your** satisfaction with the treatment experience at our clinic.
- The amount of change and the number of treatments **you** had is then compared to **your** risk-adjusted predictions from FOTO, this gives us a measure of treatment effectiveness and our efficiency (number of visits).

We have an unwavering commitment to provide every patient the best possible outcome. By measuring and analyzing accurate and evidence-based data we can constantly improve the quality of services and expertise of our staff.

- Over **5 million** patient surveys are compiled in the FOTO database.
- Researchers have utilized FOTO data to publish over **85 articles** on functional outcomes in medical journals.

LEAD THE WAY CLINICS... Leading the Way to Better Health.

The first Canadian organization to use FOTO.
